

WORK ORDER LIFECYCLE – STANDARD OPERATING PROCEDURE

A Standard Operating Procedure describes **how a person performs a task using the system**. Write it so a competent new starter can follow it on day one without asking anyone.

0. Document control

Field	Value
SOP ID	SOP-OPS-001
Procedure name	Work order lifecycle – intake to collection
Version	1.0
Status	Draft
Effective from	R1 pilot go-live (TBD)
Next review due	6 months after effective date, then annually
Process owner	Jordan Brown (Operations)
Author	J. Brown / Claude (drafted)
Approved by	Pending
Applies to	OA, TL, ATL, AM, OM (all tiers), AP, AR (all tiers) – all brands (SFM / AF / BKR / TPM / RF / EDS)
Related PRD	PRD-WRK-001
Related rules	BR-WRK-001...009 · BR-QUO-001...010 · BR-PAY-001...005 · BR-OBL-001...013 · BR-REC-001...012 · BR-ACC-001...007
Supersedes	The undocumented ClickUp + Teams + Yoda + PPR + Argus practice

1. Purpose

This procedure carries a work order from its arrival on a client system to cash collected. Following it keeps every promise on a clock (BR-OBL-007...013), keeps internal talk away from clients (BR-ACC-001), and keeps money right on both sides of the WO – the technician paid within two business days and the invoice released only when the record proves the work. Failure to follow it is how quotes sit unsent, techs quit over late payment, internal comments leak to clients, and finished jobs age un-invoiced.

2. Scope

In scope

- Reactive client work orders from any intake source, through invoice and collection

- Emergency work orders (with the compressed handling in §7.1)
- The quote, technician payment, and completion-audit sub-procedures

Out of scope

Not covered here	See instead
Sourcing and vetting new vendors/technicians	SOP-VND-001 (to be written with the vendor module, R1)
Preventive-maintenance scheduling	R3 – no SOP yet
Client onboarding and contract setup	AM practice – outside the platform
One-time ClickUp data migration	R2 cutover runbook

3. Definitions

Platform-wide terms are in `BUSINESS-RULES-CATALOG-v1.md` §4 (work order, book, NTE, soft close, TL Rep, client-visible, CICO, BFI, CO#, grey flag, obligation, tier, business hours). This SOP adds none.

4. Roles and responsibilities

Role	Responsibility in this procedure
OA (Operations Admin)	Registers intake; performs the TL Rep push to the client CMMS
TL / ATL	Accept/decline; quote review and approval; escalation point
AM (Account Manager)	Accept/decline; client relationship; approval follow-ups
OM / Senior OM (dispatcher)	Sources the tech, runs both visits, soft-closes; Senior OM builds quotes
AP	Decides and pays technician payment requests; orders parts
AR (HAR / Senior / AR)	Completion audit, release, invoicing, collections

RACI

Step	OA	TL/ATL	AM	Dispatcher	AP	AR
Register intake	A/R	I	I	—	—	—
Accept / decline	C	A/R	R	I	—	—
Route to book	R	A	C	I	—	—
Source tech & assess	—	I	—	A/R	—	—
Build quote	—	C	—	A/R (Senior OM)	—	—
Approve & send quote	I	A/R	C	I	—	—
TL Rep push	R	A	I	—	—	—
Chase client approval	I	I	A/R	I	—	—
Order parts	—	I	—	C	A/R	—
Fulfilment visit	—	I	—	A/R	—	—

Step	OA	TL/ATL	AM	Dispatcher	AP	AR
Final soft close	—	I	—	A/R	C	I
Decide & pay tech	—	—	—	I	A/R	—
Completion audit & release	—	—	—	C	—	A/R
Invoice & collect	—	—	I	—	—	A/R

R = Responsible · A = Accountable · C = Consulted · I = Informed. One A per row.

5. Prerequisites

Before starting, the operator must have:

- ☐ A platform account with the correct role and tier (§4; BR-IAM-004)
- ☐ Completed the role walkthrough for their steps (§12)
- ☐ Access to the client CMMS accounts they work (OA/AM) and the deliverables store (dispatchers/AR)

Inputs required:

Input	Source	Format
The incoming work order	Client CMMS (Corrigo/Ecotrak/ServiceChannel), email, or Seamgo	Client's WO record / message
Client, site, trade, NTE, SLA date	The client's WO	Fields on registration
Technician contact	Vendor pool / dispatcher's book	Phone/SMS

6. Trigger

A new work order appears on any of the five intake sources (BR-INT-003), at any hour. Emergencies are identified at registration and follow §7.1 immediately.

7. Procedure

#	Who	Action	System response	Complete when	Target time
1	OA	Register the WO: source, client, FM company, billing entity, site, trade, priority, NTE, SLA date, description. Mark emergency if the client flags it	Issues the WO number; emergency starts the 2-hour 24×7 clock (BR-OBL-007)	WO exists in the intake view	Same business day; emergencies immediately
2	TL / ATL / AM	Accept or decline. Declining requires a reason	Accept admits it to the pipeline; decline records decider + reason and ends the flow (BR-WRK-004)	Decision recorded	4 business hours
3	OA / TL	Route the accepted WO to the right dispatcher's book	Home book changes; dispatcher notified (BR-WRK-003)	WO in a dispatcher's book	Same business day

#	Who	Action	System response	Complete when	Target time
4	Dispatcher	Source a technician for the trade and location; contact by SMS/call. Record the agreed visit	Thread lands on the WO Messages view – internal only (BR-ACC-002); status assessment scheduled	Visit date agreed and status set	1 business day
5	Dispatcher	Run the assessment: tech on site (assessment ongoing); collect findings and before-photos onto the WO	Photos and updates attributed on the feed	Findings + before-photos on the WO; status waiting for quote	Per visit date
6	Senior OM	Build the quote: incurred section for work already done; one or more proposed options with narrative and typed lines. Watch the NTE meter. Submit	Totals/tax computed (BR-QUO-003...005); NTE flag if exceeded (BR-QUO-010); submit sets pending approval and starts the 4-business-hour review clock (BR-OBL-009)	Quote pending approval	2 business days from waiting for quote (BR-OBL-008)
7	ATL (any TL/AM/admin may act)	Review the quote. Approve & send, or reject with feedback	Approve & send sets sent; reject returns to draft with feedback (BR-QUO-008...009)	Quote sent, or back with the builder	4 business hours (BR-OBL-009)
8	OA	TL Rep: push the client summary and status into the client's CMMS. Push only what the platform marks client-visible	The push is recorded on the WO (BR-ACC-006, BR-INT-002)	Client CMMS shows the quote; status !! waiting for approval	Same business day as sent
9	AM	While waiting: follow up with the client every 5 business days, recording each contact on the WO. If approval was granted on-site , record who granted it and skip to step 10	Approval-followup obligation prompts at 5 business days (BR-OBL-011); on-site approval recorded per BR-WRK-009	Client approves (status approved) or WO is declined/cancelled	Until resolved
10	Dispatcher	On approval: schedule the fulfilment visit – offer the assessing tech first (BR-DSP-003). If parts are needed, hand to AP first: status please order parts	Schedule clock: 2 business hours from approval (BR-OBL-010)	Status job scheduled (or waiting for parts → then job scheduled)	2 business hours
11	AP (<i>only if parts</i>)	Order the parts; note supplier, cost, and ETA on the WO	Status waiting for parts until arrival	Parts in hand; dispatcher re-engaged	Per supplier ETA
12	Dispatcher	Run the fulfilment visit (job ongoing); collect after-photos and completion evidence; tick every checklist item	Soft-close completeness tracked (BR-WRK-007)	Work done; after-photos + checklist complete	Per visit date
13	Dispatcher	Raise the technician's payment request: payee, amount, purpose, method; alternate recipient only with reason (BR-PAY-001, 005). Check the prior-payments list first	Request enters the AP queue as requested; 2-business-day clock starts (BR-OBL-012)	Request submitted; status done/incurred	At final soft close (BR-PAY-004)
14	AP	Decide the request – approve and pay, or reject with reason	Decisions attributed; paid amount lands in WO cost (BR-PAY-003, BR-FIN-002)	Request paid or rejected	2 business days (BR-OBL-012)

#	Who	Action	System response	Complete when	Target time
15	AR	Work the audit queue: open the WO's check read-out (quote on file, sign-off sheet, before/after photos, CICO, CO#, labels). Fix or bounce findings per §7.2	Findings computed per BR-REC-003...009	No major findings; minors corrected or waived (Senior AR+, recorded)	Grey-flag aging watched daily
16	AR	Release: confirm Admin Check and Quote Check	WO moves to invoicing Ready (BR-REC-002, BR-REC-010)	WO in Ready lane; status !! ready to invoice	Same day as clean audit
17	AR	Invoice the client in their CMMS; record it	WO to Invoiced; aging counts from invoice date (BR-REC-011)	Invoice recorded both sides; status << invoiced not paid >>	Same business day as release
18	AR	Collections: work the aging list; record every follow-up until payment arrives	Paid closes the loop; WO archives invoiced (BR-REC-012)	Payment received and recorded	Follow-up cadence per client

7.1 Decision points

At step	Condition	Then	Rule
1	WO is an emergency	Register immediately at any hour; dispatch may proceed ahead of quoting (stage order pending PRD Q5); the 2-hour acknowledgment clock governs	BR-OBL-007
2	Outside coverage (trade/geo) or NTE unworkable	Decline with reason — criteria being formalised (PRD Q1)	BR-WRK-004
5	Job was approved up front by the client	Skip quoting (steps 6–9); go to step 10	BR-WRK-005
6	Quote total exceeds NTE	Do not submit silently: request an NTE increase via the AM, or restructure the options; the flag follows the quote to the approver	BR-QUO-010
9	Client approves on-site during assessment	Record grantor + time; skip remaining wait	BR-WRK-009
10	No parts needed	Skip step 11	—
12	Job cannot complete in one fulfilment visit	Status return trip needed ; repeat from step 10 scheduling	BR-WRK-005
13	WO is BFI	After-photos are not required; everything else in final soft close still is	BR-REC-007
15	SharePoint checks read "offline — skipped"	Audit on the remaining evidence; the release gate still applies	BR-REC-002

7.2 Sub-procedure — bouncing an audit finding

1. AR opens the finding and uses its resolution path (the WO, or the deliverables folder).
2. If the fix belongs to the dispatcher (missing photos, CICO, quote record): post an **internal** update on the WO naming the finding, and notify the dispatcher.
3. The dispatcher corrects within 1 business day and replies on the WO.
4. AR re-runs the read-out. Minors that remain may be waived only by Senior AR+ with the waiver recorded (BR-REC-010).
5. Repeat until clean, then release (step 16).

8. Exceptions and escalation

#	Exception	Immediate action	Escalate to	Within	Record as
X1	No technician found for trade/location	Keep sourcing; post an internal update with attempts made	TL	1 business day	Internal update on the WO
X2	Emergency clock at risk (no acknowledgment in sight)	Anyone seeing the tier-3 ping acts or phones the dispatcher	TL immediately	Within the 2-hour window	Obligation + internal update
X3	Tech no-show	Reschedule at once (schedule clock restarts); note the vendor	TL if repeat offender	Same day	Internal update + vendor note
X4	Client dispute after invoicing	Stop collections contact on that WO; assemble the WO record (photos, sign-off, approvals – this is why audit exists)	AM + HAR	1 business day	Internal update; outcome on the WO
X5	Suspected internal content reached a client	Stop the channel; capture what leaked	Jordan Brown	Immediately	Incident – stop-the-line (PRD counter-metric)
X6	Platform unavailable	Follow §8.1	Jordan Brown	Immediately	Retrospective entries within 4 business hours

8.1 Manual fallback

1. New intake: register the WO in the legacy channel (client CMMS remains the client truth; note client, site, trade, NTE, time received on the shared intake sheet).
2. Emergencies: phone the dispatcher directly; the 2-hour obligation still stands – track it by hand.
3. In-flight WOs: continue by phone/SMS; keep photos and notes on the device.
4. When the platform returns: enter everything with original timestamps, marked "retrospective entry", within 4 business hours.
5. The TL verifies the intake sheet against the platform before the next business day opens. Reconciliation is not optional.

9. Timing and service targets

Measure	Target	Source	Consequence of breach
Emergency acknowledgment	≤ 2 hours, 24×7	BR-OBL-007	Critical obligation; TL escalation
Quote submitted	≤ 2 business days from waiting for quote	BR-OBL-008	Breached obligation on the dispatcher
Quote reviewed	≤ 4 business hours from submission	BR-OBL-009	Breached obligation on the ATL pool
Fulfilment scheduled	≤ 2 business hours from approval	BR-OBL-010	Breached obligation on the dispatcher
Client approval follow-up	Every 5 business days, recorded	BR-OBL-011	Breached obligation on the AM
Payment request decided	≤ 2 business days	BR-OBL-012	Breached obligation on AP
Client SLA date	Per contract	BR-OBL-013	Breached obligation; AM informed

All clocks pause outside business hours except emergencies (BR-OBL-001...002). Snoozing any of these requires a reason and caps at 72 hours (BR-OBL-005). None can be dismissed (BR-OBL-004).

10. Records and evidence

Record	Where held	Retained	Who may access
The WO, its history, updates, photos	Platform	Pending policy (PRD Q7)	All internal; client sees only client-visible content
Technician thread (calls, transcripts, SMS)	Platform (Quo mirror)	With the WO	Internal only – never client-facing (BR-ACC-002)
Quote revisions and decisions	Platform	With the WO	Internal; client receives the summary only
Payment requests and decisions	Platform	With the WO	Internal; amounts hidden from techs/clients (BR-ACC-003)
Sign-off sheet, before/after photos	Deliverables store (SharePoint), linked from the WO	With the WO	Dispatchers, AR
Audit findings, waivers, release	Platform	With the WO	AR, TL
Manual-fallback intake sheet	Shared drive	Until reconciled + 12 months	Ops

11. Quality and monitoring

KPI	Definition	Target	Reviewed	By
Obligation breach rate	Breached ÷ opened, weekly (PRD M2)	Falling; –50% in 8 pilot weeks	Weekly	Jordan Brown
Quote review turnaround	Median business hours submit → decision (PRD M4)	≤ 4	Weekly	TL
Payment turnaround	Median request → paid	≤ 2 business days	Weekly	AP lead
Approval-chase coverage	Waiting-approval WOs > 5 days with a recorded follow-up (PRD M3)	100%	Weekly	AM
First-pass audit clean rate	WOs released with zero findings ÷ audited	Rising	Monthly	HAR
Snooze hygiene	Snoozes with substantive reasons; repeat-snoozes on one obligation	≤ 2 per obligation	Monthly	Jordan Brown
Retrospective entries	Records entered after the fact (fallback or otherwise)	≤ 1%	Monthly	Jordan Brown

Audit: this procedure is audited monthly by the process owner, sampling 10 completed WOs end-to-end; findings are recorded as internal updates on the sampled WOs and rolled into SOP revisions.

12. Training and competency

Requirement	Applies to	Format	Refresh	Competency confirmed by
Platform walkthrough – own steps of §7	Every role	2h hands-on with seeded demo WOs (hero WO-39403)	On SOP revision	Supervised handling of 3 live WOs

Requirement	Applies to	Format	Refresh	Competency confirmed by
Quote building	Senior OM+	1h on the quote screen: incurred vs proposed, NTE, summary	On rule change	2 quotes approved without rejection
Audit read-out	AR	1h on findings, waivers, release gate	On rule change	5 audits alongside a Senior AR
Visibility discipline (client-visible vs internal)	Every role	Part of walkthrough; zero-tolerance briefing	Annual	Spot checks in monthly audit

13. Related documents

Type	Reference	Relationship
PRD	PRD-WRK-001	Defines the system behaviour this procedure relies on
Business rules	BUSINESS-RULES-CATALOG-v1.md	Every clock, gate, and boundary cited here by ID
Process map	product/wo-lifecycle.md (v3)	The as-is source this procedure operationalises
SOP	SOP-VND-001(planned)	Vendor sourcing and vetting

14. Revision history

Version	Date	Author	Change	Approved by	Retraining needed
1.0	2026-08-07	J. Brown / Claude (drafted)	Initial release	Pending	Yes — all roles at pilot start

Appendix — Author's checklist

- ☒ A new starter could follow this without asking a question
- ☒ Every step has one actor and one action
- ☒ Every decision point has a mechanical rule (open judgement calls are flagged to PRD questions, not left silent)
- ☒ Business rules referenced by ID, never restated
- ☒ Manual fallback exists, with a non-optional reconciliation step
- ☒ Every escalation names a role and a time limit
- ☒ KPIs measurable from data the platform captures
- ☒ Exactly one Accountable per RACI row
